Notes:

- QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP-DD
 module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly
 to the host board signal-common ground plane.
- 2. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Supply requirements defined for the host side of the Host Card Edge Connector are listed in Table 13. For power classes 4 and above the module differential loading of input voltage pads must not result in exceeding contact current limits. Each connector Vcc contact is rated for a steady state current of 1500 mA.
- 3. Reserved and no Connect pads recommended to be terminated with 10 k Ω to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module.
- Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A, 2A, 3A, 1B, 2B, 3B. (see MODULE PAD ASSIGNMENT) Contact sequence A will make, then break contact with additional QSFP-DD pads. Sequence 1A and 1B will then occur simultaneously, followed by 2A and 2B, followed by 3A and 3B.
- 5. Full definitions of the P/VSx signals currently under development. On new designs not used P/VSx signals are recommended to be terminated on the host with 10 k Ω
- 6. ePPS/Clock if not used recommended to be terminated with 50Ω to ground on the host.
