

800G OSFP 2xFR4 Transceiver Module

P/N: WST-OS8-FR4X2-C

Features:

- OSFP form factor
- Supports a single 800 Gb/s aggregate data rate
- 8 optical and electrical lanes at 106.25 Gb/s PAM4
- Dual 4-lane CWDM EML transmitters with PIN array receivers
- Dual duplex LC connector
- 2xFR4 (2 km) optical interface over single-mode fiber with host-side FEC
- Single 3.3 V power supply
- Power consumption: Typical 12.5 W, Max. 16 W
- Operating case temperature: 0 °C to +70 °C
- Digital diagnostic monitoring (DDM) function

Applications:

- 800 Gigabit Ethernet links over single-mode fiber
- Data center interconnect applications
- Switch-to-switch and switch-to-router interconnections

Standards:

- IEEE 802.3cu compliant
- 100G Lambda MSA compliant
- OSFP MSA compliant
- CMIS management interface compliant with CMIS 5.2 or later
- RoHS compliant

Description

The WST-OS8-FR4X2-C is an 800G OSFP optical transceiver designed for transmission over single-mode fiber (SMF). It provides eight electrical lanes operating at 106.25 Gb/s PAM4 and supports a 2xFR4 optical interface for transmission distances up to 2 km.

The module integrates dual 4-lane CWDM transmitters based on EML (electro-absorption modulated laser) technology and PIN array receivers for optical detection. A dual 4-lane architecture is implemented to enable efficient optical signal transmission through a dual duplex LC interface within the OSFP form factor.

Functional Description

The module is intended for use in 800G Ethernet systems requiring high-speed optical interconnection over single-mode fiber. It operates with host-side KR4 forward error correction (FEC) to ensure reliable data transmission over distances up to 2 km.

In system applications, the module enables optical links between networking equipment such as switches and routers, supporting high-bandwidth data transmission in data center and interconnect environments. It complies with standard OSFP management interfaces, allowing system-level configuration, status monitoring, and fault reporting.

Notes:

1. Average launch power, per lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.
2. Transmitter reflectance is defined looking into the transmitter.
3. Average receive power, per lane(min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.
